Nebraska Pumping Plant Performance Criteria

Amount of work produced per unit of energy used

Energy Type	Engine or Motor Output / Energy Use Rate hp / (unit/hr)	Energy Added to Water / Energy Use Rate, whp / (unit/hr)	Energy Unit
Diesel	16.7	12.5	gallon
Gasoline	11.5	8.66	gallon
Propane	9.2	6.89	gallon
Natural Gas	82.2	61.7	1000 ft ³
Electricity	1.18	0.885	kWh

Pumping plants exceeded the NPC. (15% of 165 tests in 1980-81)

2009Irrigation-BURR005

Pumping Plant Performance

- The average performance rating of 165 pumping plants tested in 1980-81 (PUMP project) was 77% of the NPC
- Stated differently, the average pumping plant was using $1/0.77 = 1.3$ times as much energy as called for by the NPC.
